

Cloud computing with Monitor

Get working immediately, with no complex, costly up-front investment.

KEY FEATURES

- > mpower - fully integrated project control software, wherever you can go online
- > full support and free upgrades
- > implementation consultancy
- > full product training
- > freedom to scale up and down as projects demand
- > one monthly fee for easy budgeting

INTRODUCING CLOUD COMPUTING WITH MONITOR

The business world is becoming more connected every day, and the traditional way of implementing software systems by installation on individual servers and desktops is no longer the only - or even the best - means of getting up and running. Monitor's Cloud Computing solution is the answer for many clients, projects and applications. With the Cloud, you can have the power of a global corporation at your workstation wherever and whenever you need it, without the costly & time-consuming exercise of installing new hardware and software.

With Monitor's Cloud Computing solution you have the power of a global corporation at your workstation whenever you need it, but with none of the costly investment in hardware and software. All you need is web access.

THE CLOUD SAVES YOU MONEY

There's no up-front investment in new hardware or software with Monitor's Cloud - and it's been estimated that cloud computing can save up to 50% on IT labor costs compared with traditional delivery.*

THE CLOUD IMPROVES CAPITAL UTILIZATION

By freeing up capital compared to traditional implementation, cloud computing can improve capital utilization by up to 75%.*

THE CLOUD SAVES YOU TIME AND TROUBLE

Traditional implementation of new systems can typically take weeks or even months, particularly if users are in various locations around the world. With Monitor's Cloud, you can be up and running in no time.
