COMPLETE CONTROL FOR CAPITAL PROJECTS

Successful, efficient management of field development, engineering, construction and other large capital projects requires complete control. To meet the challenge, you need a solution that supports planning, estimating, progress evaluation and budget forecasting - preferably in one, integrated application.

mpower is the answer. For capital projects, mpower supports efficient planning of the entire scope of work, total cost and budget estimate and forecast, data capture during execution, incurred cost, S-curves and performance. It works with your existing software and systems, and it's easy to implement and use. And as it's entirely web-based, it can be put into action within hours, anywhere you can get access to the internet.

TOTAL VISIBILITY

It is vital to know the state of your project at every stage of its life cycle and that your information is current, accurate and relevant, so mpower is a powerful tool for controlling and reducing costs. Data is only entered once, reducing the chance of error and further reducing management time and costs. As a web-based solution, mpower allows access to anyone in your organization - and to sub contractors or clients - wherever they are in the world.

ABOUT MONITOR

Since 1987, Monitor has been providing software, training and consultancy for Project Cost Management across a wide spectrum of markets, including the offshore oil and gas industry. Based in Aberdeen, Monitor also has offices in Houston, Calgary and Perth (Australia), servicing clients throughout the world. mpower is the company's flagship software product is a tailored, integrated solution specifically designed for capital projects.

Cost and performance management for Capital Projects.

MAKING DATA WORK FOR YOU

mpower captures and analyses real time data, so it can tell you what's happened, what's happening and what's going to happen. You're planning and forecasting with the most accurate information available.

mpower records time and expense electronically for accurate status with minimum administrative hassle. This in turn ensures accurate cost performance reporting, delivering an excellent return on investment in a very short period.

Supply chain management becomes easier and more accurate, as mpower can help you speed up procurement cycles, driving down costs and effortlessly linking back to corporate systems. With mpower, you can see every procured item instantly, with no guesswork. Armed with robust project data, you can report quickly and accurately, keeping your costs and cash flow under firm control.

mpower's sophisticated HR system holds standard information like names and addresses, but it goes much further than that. It can hold skill and qualification details - certifications, permits and allowances, for example - and it can remind you when these become out of date or require renewal. It also maintains a comprehensive database of work norms for labor and materials to help you value jobs accurately.

With an easy-to-use, customizable reporting tool, mpower allows you to generate sophisticated tabular and graphical analysis at the touch of a button.

INTEGRATION

mpower for capital projects has been designed for fast, easy implementation. You can choose terminology that suits the processes and rules of your organization, and mpower is multi-language and multi-currency. No matter what systems you currently operate, mpower is built to integrate seamlessly - so you can leverage value from your existing investment.

mpower has been proven through successful integration with

- SAP
- Oracle E-business Suite
- IBM Maximo
- Primavera
- Microsoft Project

DASHBOARDS

mpower for capital projects uses integrated dashboards to provide project managers with cost and performance information in a single comprehensive view at the end of each shift. With dashboards, managers can avoid the time-consuming task of compiling reports, and clearly see what actions need to be taken on a shift-by-shift basis.
