

Enhance the effectiveness of your maintenance data.

KEY FEATURES

- > Automatically visualise Maximo work orders
- > Optimize schedules using “drag and drop”
- > See work orders and PM schedule at the same time
- > Visualise impact of changes and immediately update Maximo work orders
- > What-if capability for future resource and shutdown planning
- > View work orders and PM schedule at the same time
- > Filtering and grouping to “separate the wood from the trees”
- > WYSIWYG reporting

INTRODUCING i-maintain

i-maintain is a powerful planning and scheduling tool which allows you to plan maintenance operations in a clear visual environment. Using i-maintain you can instantly visualize resourcing issues and control backlog and as you plan for every eventuality, i-maintain allows you to create standalone plans for ‘what if’ scenarios.

i-maintain WORKS FOR

- Maintenance schedules
- Asset life cycle management
- PM Scheduling
- Work Order planning
- Resourcing issues and backlog control
- One-off planning for ‘what if’ scenarios

i-maintain AND MAXIMO

i-maintain is fully integrated with Maximo 4.x and above.

Maximo is IBM’s key software for asset life cycle and maintenance management. By integrating with the industry leader, i-maintain enhances your existing systems to provide powerful additional features while you continue to benefit from your original investment. It also means that i-maintain is quick and easy to implement, as well as very affordable.

i-maintain BENEFITS

- Take the effort out of optimising and smoothing your maintenance schedule
- Fully integrated with Maximo
- Instantly visualizes resourcing issues
- Creates standalone plans for ‘what if’ scenarios
- Helps you control the Work Order backlog
